Our ultimate aim is to develop technologies that make life simpler and better. At Bosch, we are well up to these simple words: "Technology for life." While we focus firmly on security and the environment, we develop solutions that give people the key to a better society; we create products that open new doors in everyday life, and we simplify everyday life for people all over the world. We see one key aspect in our work as new knowledge, expertise in key technologies, and excellence in the development of hardware, software, and services. We see our "decoding tomorrow," and the following facts and figures show that this is no empty phrase.

The Bosch Group comprises Robert Bosch GmbH and its roughly 440 subsidiary and regional companies in some 60 countries.

We are working on products and solutions that either contain artificial intelligence or have been developed with its help.
